
SULAWESI

ELEVATION 0 ft (0 m) – 11,411 ft (3,478 m)

PRIMARY GROWING REGION

ARABICA COFFEE AREAS

Sulawesi is one of the largest and oldest islands in the Indonesian archipelago. Coffee was introduced to the mountainous island in the 17th century by Dutch settlers. Coffee thrives in the lush, volcanic soil in the mountainous Toraja Highlands, named for the indigenous Toraja people. Much of the coffee is produced in traditional wet-hulled (semi-washed) methods where ripe cherries are picked from small backyard plots, processed using hand-cranked de-pulpers, and dried under the sun on tarps and woven mats. More recently, producers are increasingly adopting the fully-washed processing method.

Sulawesi coffee farmers are supported by the Farmer Support Center (FSC) in Sumatra. Our agronomists and quality specialists provide open-source support to farms throughout Indonesia facilitating and training farmers about integrated farming and best practices that impact coffee quality.

ARABICA ALTITUDE
3,280 - 6,562 ft
(1,000 - 2,000 m)

PRIMARY VARIETALS
S795, Catimor, Typica

PRIMARY PROCESSING METHODS
Semi-washed, Washed

HARVEST
April - August
